46-56 lbs	9 ML	3 ½ Tablets	-	10 ML	4 Tablets	10 ML	2 Tablets

- ** = Tylenol labeling will say infants Suspension **OR** Children's Suspension = **THEY ARE THE SAME PRODUCT** because the concentration (160 MG = 5 ML) of the Tylenol is the same. This product will either come with a "syringe" or a "medicine cup". We always recommend using a syringe as it is more precise.
- **KEY POINTS ABOUT THESE PRODUCTS: ALWAYS** review the dosage on the bottle/box as the concentrations may vary among brand/manufacture. The concentration/drug information can be found on the box where the "drug facts" are listed. A lot of the medications will say "talk to your doctor first before giving" – if we have recommended the medication and you use the correct dose according to this chart, it is OK to use. **We recommend bringing the medication that you will be using to your visit for verification. IF YOU MAKE A MISTAKE/ACCIDENTILY GIVE THE WRONG MEDICATION – CALL POISON CONTROL @ 1800-222-1222**
